III.   Solution for each problem and lessons for team

In this sprint, since there are no problems in every task, consequently, there are no solutions for any problem. But due to a huge amount of objects need to be created on group's webapp, frontend developers of our group still have not completed all yet. Finally, through 1 week for this sprint, team members partially understood:

- How to model use cases of the product through **Use case Diagram**
- How to specify flows, pre-and-post conditions,... of each use case through **Use-case Specification**
- How to use **Wix** to create and develop a webapp for out team
- How to analyze and design a framework for the database of our product.
